And this equation is always true, of however small a magnitude we suppose x to be taken; and therefore it will also be true when x is $=; o$. But, when x is $= o$, all the terms in the equation that involve x will be equal to o likewise. and consequently the equation will be $E =--F----E-f-2E$. Therefore (adding $--E$ to both sides) we shall have $E +--E =--F+ 2E, ftt tn tn$ and (subtracting E from both sides) we shall have $--E = i-F + E, or--x m tn m E = E, Y-F$; that is, $--E$ will be equal to E together with $--F$ either added to it or subtracted from it, as may be necessary to produce the said equality. But, because n is greater than tn , $--E$ will be much greater than E ; and diere. fore $--F$ must be added to E in order to make...
